

... act professionally:

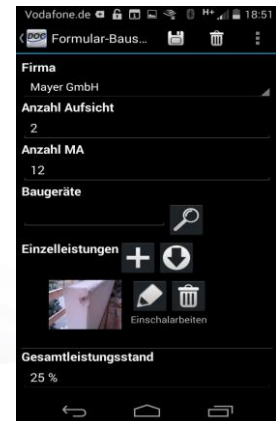

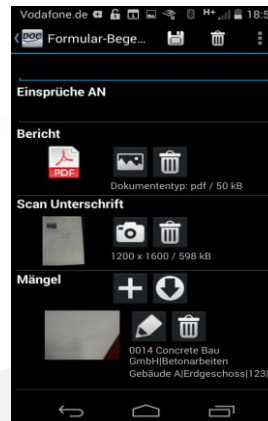

- documentation of your construction site with DOC.mobile

Confirmed by the results of 2. DEKRA study (<http://www.dekra.de/de/1679>) regarding construction defects in buildings, the building quality of German construction sites has become worse in the last years. According to a recommendation of the responsible test engineer at DEKRA Industrial, it is very important „... to ensure exact planning [...] and professional construction management...“.

We help YOU to keep control and overview !

Our DOC.mobile construction documentation...

- provides overview of the complete development of construction sites
- guarantees professional, complete image- and service documentation regarding construction process and progress (complete, legally secure construction diary)
- consists of three parts: our mobile app (1.), our web application (2.) and the reporting tool (3.)
- essential for the supervision of all kind of construction activities

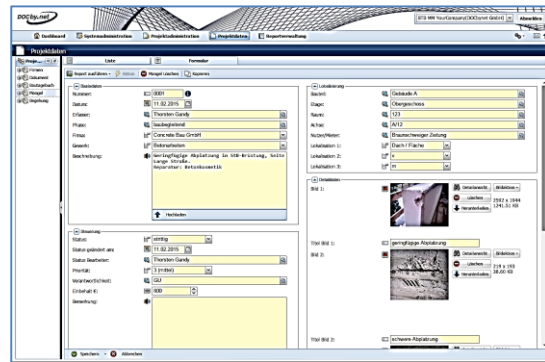

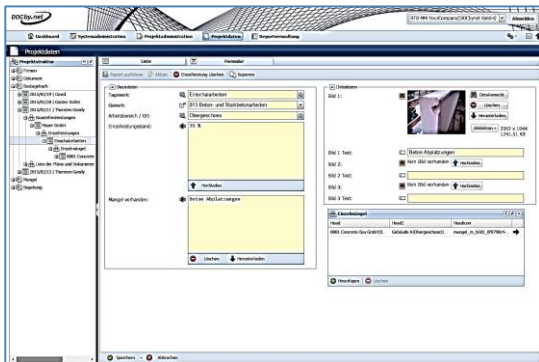

1. mobile app

- with our innovative DOC.mobile app, all construction site data can be recorded and retrieved via Android smartphone or tablet PC
- optimal input comfort; easy and intuitive operation
- allows easy synchronization of data with the web application; on- and offline solution
- mobile service performance function of daily work; structured on working area and place with detailed picture documentation
- recording and administration of construction plans and additional documents
- documentation of companies and personnel involved, construction supervision and weather data
- documentation of building inspections, construction site visits and examination
- no more media breaks: pictures, voice and pen input for the documentation of the construction process will be automatically assigned

2. web application

- graphical presentation of daily construction processes in easy graphs and well structured project documentation forms
- perfect further processing of data in the office with our server solution; easy synchronization of data; offline mode
- fully automatic report generation (standardized or customized) without complicated post processing
- direct connection to our claim management tool
- up-to-dateness of all project participants via DOC.mobile cloud service
- continuous development of standard project templates

3. documentation and reporting

- documentation of building activities and building inspections
- detailed picture documentation
- fully automatic report generation (standardized or customized)
- easy and comfortable report evaluation which can be used to enforce claims against (or to fend off claims of) third parties
- determination of parameters for the calculation of further projects
